

ZAPBILL

POWERED BY
OLYMPUS AI

Bring your rate to Olympus

Meet the Olympians

The Team behind ZapBill

Francesco Nisi
AI Engineer

Giulia Lorelli
Utility Domain Expert

Elio Raiola
AI Strategist

Piero Stabellini
Team Lead

The Bill Shock

- **Market Volatility:** Energy and internet rates change constantly and unpredictably
- **Consumer Blindness:** Over 85% of consumers are completely blind to their own active contract conditions
- **The Procrastination Gap:** Tracking market shifts is tedious, causing a silent, expensive gap between current payments and the best live market offers

The **Shock:** Sleeping on old contracts while the market moves like lightning

The Household Guardian

- **Instant Budget Defense:** Users provide basic bill details, and our platform instantly **screens the entire live market**
- **Tailored Saving Reports:** Generates a clear, customized blueprint featuring **the absolute best available offers for the user**
- **Divine Simplicity:** Olympus AI maps active utility data directly against **today's top marketplace rates**, cutting through the noise

The **Shield**: Transforming your raw bill data into a clear map of **market savings**

What Makes Us Unique

- **Athena's Justice:** Absolute factual reliability with **zero** provider favoritism
- **Divine Simplicity:** A clear saving report in just a few steps with **minimal, essential details**
- **Hermes' Delivery:** **Email updates** the moment better market offers surface
- **Immortal Vigilance:** Continuous, automated operation with **zero human downtime**
- **The Olympus Engine:** Advanced AI foundation that drastically slashes **Time-to-Market**

Athena's Decree: Merging absolute transparency with effortless user simplicity

Data Reliability

- **Mathematical Rigor:** We replace generic statistical averages with exact analytical formulas to calculate savings
- **Structured Validation:** Every user input is cross-referenced strictly against verified, real-time market tariffs
- **Scalable Precision:** Our core architecture is built to maintain this rigorous verification standard as our AI Vision capabilities expand

The Metric: Grounding our solution in factual accuracy and verified database integrity

Olympus Architecture

Limitations

- **Static .txt data store instead of real provider APIs**, offers don't update in real time
- **RAG retrieval returns truncated, mixed snippets**, not the full, filtered catalog
- **Calculation logic moved into playbook instructions** (a separate doc caused two confusing calls). More stable, but less modular
- **Variable-rate offers (PUN/PSV + spread) aren't pure numbers** can't be computed directly
- **Gemini 2.5 Flash has documented limits on complex logical and causal reasoning** – Google recommends Pro for complex tasks

Future Developments

- **Integrate live provider/market APIs for real-time**, up-to-date offers
- **Upgrade to Gemini 2.5 Pro (or a dedicated tool)** for reliable, deterministic math.
- **Structured**, per-utility data stores with variable-rate (PUN/PSV) support
- **Native AI Vision (zero-click extraction)** snap a photo of any bill and our AI will extract the data for you
- **One-Click Autonomous Switch** approve and execute the new contract in a single tap; the agent handles the whole switching process

The Promethean Gift: Bringing the light of AI to conquer the dark complexity of your bills
